

Lab Manual
For
Web technology (1ET1050501)
B.Tech Third (Semester-V)

Academic Year
2023-24(ODD)

Department of
Information Technology
Sankalchand Patel College of
Engineering

Certificate

This is to certify that the Lab/term work carried out in the subject of Web Technology and recorded in this journal is the bonafide work of Mr. Patel Nil Rajendrakumar PRN No:-2021095900023824 of B.Tech. Semester :V in the branch of Information Technology during the academic year 2023- 2024.

Faculty in Charge Date:

Head of the Department Date:

INDEX

Sr. No	Topics	Date	Signature
01	Write HTML code for table tag with attribute		
02	Write HTML code for displaying image and demonstrate Hyper-link.		
03	Write HTML code to attach a video on webpage using embed tag in html		
04	Create a feedback form using HTML code.		
05	Develop and demonstrate the usage of inline, internal and external style sheet using CSS Design a web page using CSS which includes the following: <ul style="list-style-type: none"> • Use different font styles • Control the repetition of image with background-repeat and no-repeat property • Define style for links as a: link, a: active, a: hover, a: visited 		
06	Write a code for creating static page design using division tag.		
07	Write a PHP script to display welcome message.		
08	Write a php script to demonstrate use of arithmetic operators		
09	Write a php script to calculate total marks of student and display grade.		
10	Create form using text box, check box, radio button, select submit button and display user inserted value in new php page.		

11	<p>Write a program to upload image with extension .gif, .jpeg and .png. Design a web page in PHP which allows user to upload file with following restrictions.</p> <ul style="list-style-type: none"> • Only “pdf” and “jpeg” file can be uploaded. • File size should not exceed 1000KB. 		
12	<p>Write a program to read input data from table and hyperlink while displaying record and display that practical record on another page</p>		
13	<p>Write a program to manipulate data from table and display all this information using table format.</p>		
14	<p>Design a XSLT to read data from XML File and print it in tabular manner. Use XML file of store book information like its name, author, publisher and price for at least two books regarding the DTD for the same file.</p>		
15	<p>Design HTML form with java script to perform following task: •</p> <ul style="list-style-type: none"> • To show “You Clicked Me” message when a user clicks on button “Click Me”. • Takes Integer number as input and tells whether the number is ODD or EVEN. • Takes two real numbers as input and perform arithmetic's operation chosen by user from list of radio button. 		
16	<p>Design HTML form with java script for registration purpose with following constraints:</p> <ul style="list-style-type: none"> • Name accepts only alphabet character • Mobile Number with exactly 10 characters • Email Id in valid format • Display hint on mouse over the textbox 		

1. Write HTML code for table tag with attribute.

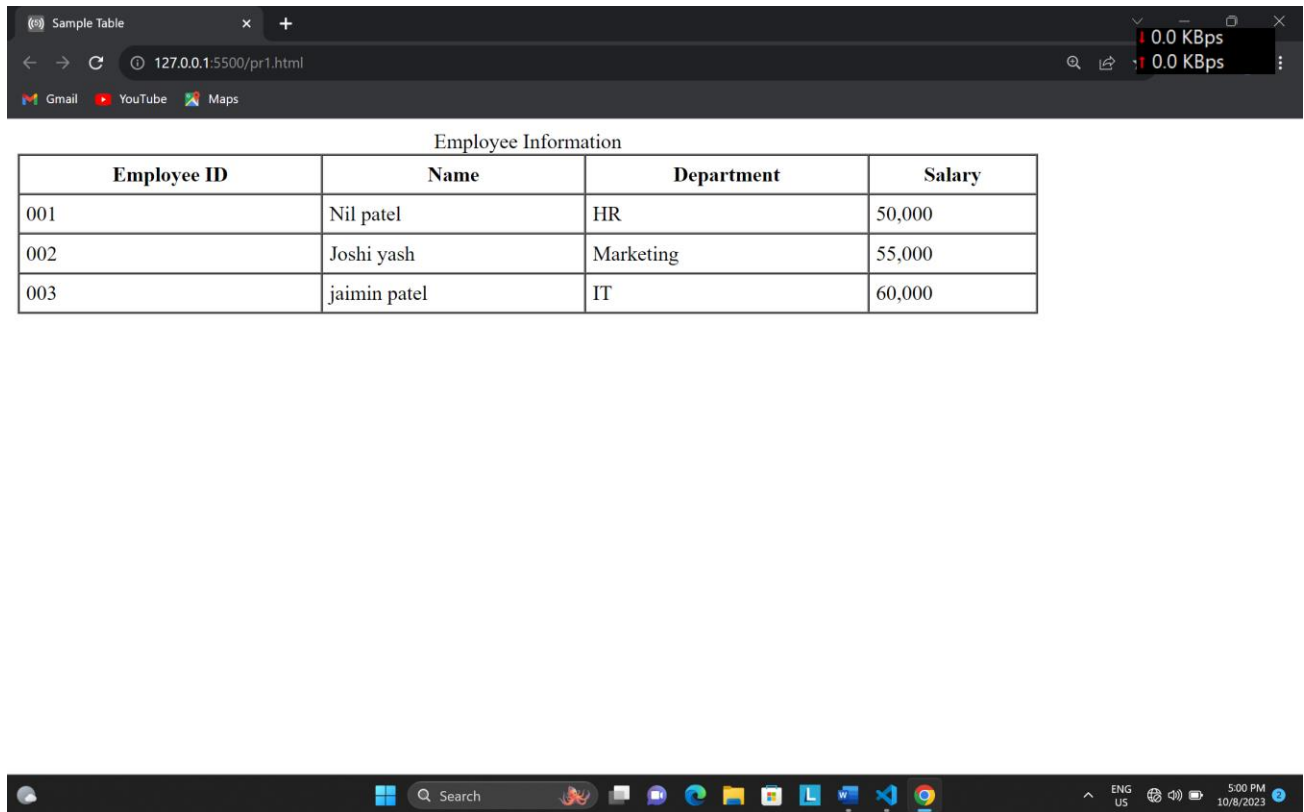

Ans: pr1.html

```
<!DOCTYPE html>
<html>
<head>
  <title>Sample Table</title>
</head>
<body>

<table border="1" cellpadding="5" cellspacing="0" width="80%">
  <caption>Employee Information</caption>
  <tr>
    <th>Employee ID</th>
    <th>Name</th>
    <th>Department</th>
    <th>Salary</th>
  </tr>
  <tr>
    <td>001</td>
    <td>Nil patel</td>
    <td>HR</td>
    <td>50,000</td>
  </tr>
  <tr>
    <td>002</td>
    <td>Joshi yash</td>
    <td>Marketing</td>
    <td>55,000</td>
  </tr>
  <tr>
    <td>003</td>
    <td>jaimin patel</td>
    <td>IT</td>
    <td>60,000</td>
  </tr>
</table>

</body>
</html>
```

Output

The screenshot shows a web browser window with a single tab titled 'Sample Table'. The address bar displays the URL '127.0.0.1:5500/pr1.html'. Below the browser window, a table titled 'Employee Information' is displayed. The table has four columns: 'Employee ID', 'Name', 'Department', and 'Salary'. It contains three rows of data. The Windows taskbar is visible at the bottom of the screen, showing the search bar, task view button, and several application icons. The system clock indicates the time is 5:00 PM on 10/8/2023.

Employee ID	Name	Department	Salary
001	Nil patel	HR	50,000
002	Joshi yash	Marketing	55,000
003	jaimin patel	IT	60,000

2. Write HTML code for displaying image and demonstrate Hyper-link.

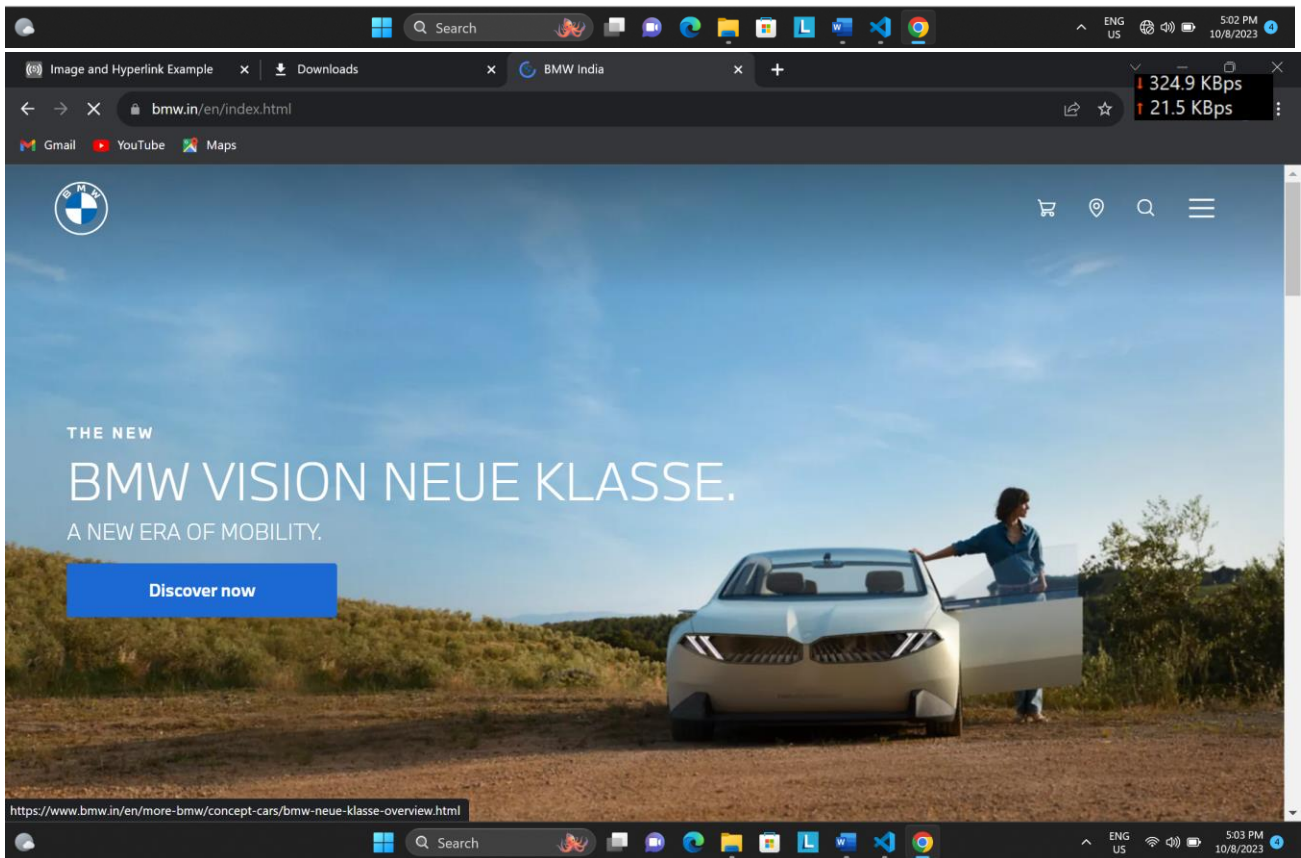

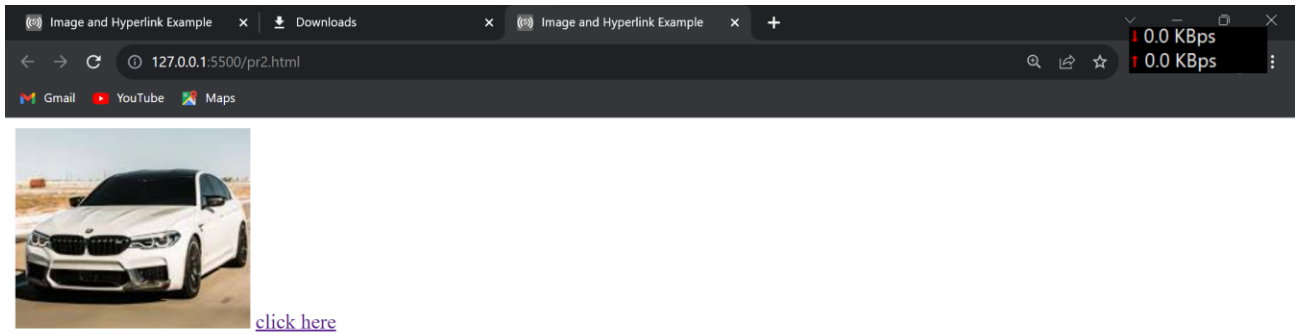

Ans .Pr2.html

```
<!DOCTYPE html>
<html>
<head>
  <title>Image and Hyperlink Example</title>
</head>
<body>

  <a href="https://www.bmw.in/en/index.html">click here</a>
</body>
</html>
```

Output:

3. Write HTML code to attach a video on webpage using embed tag in html.

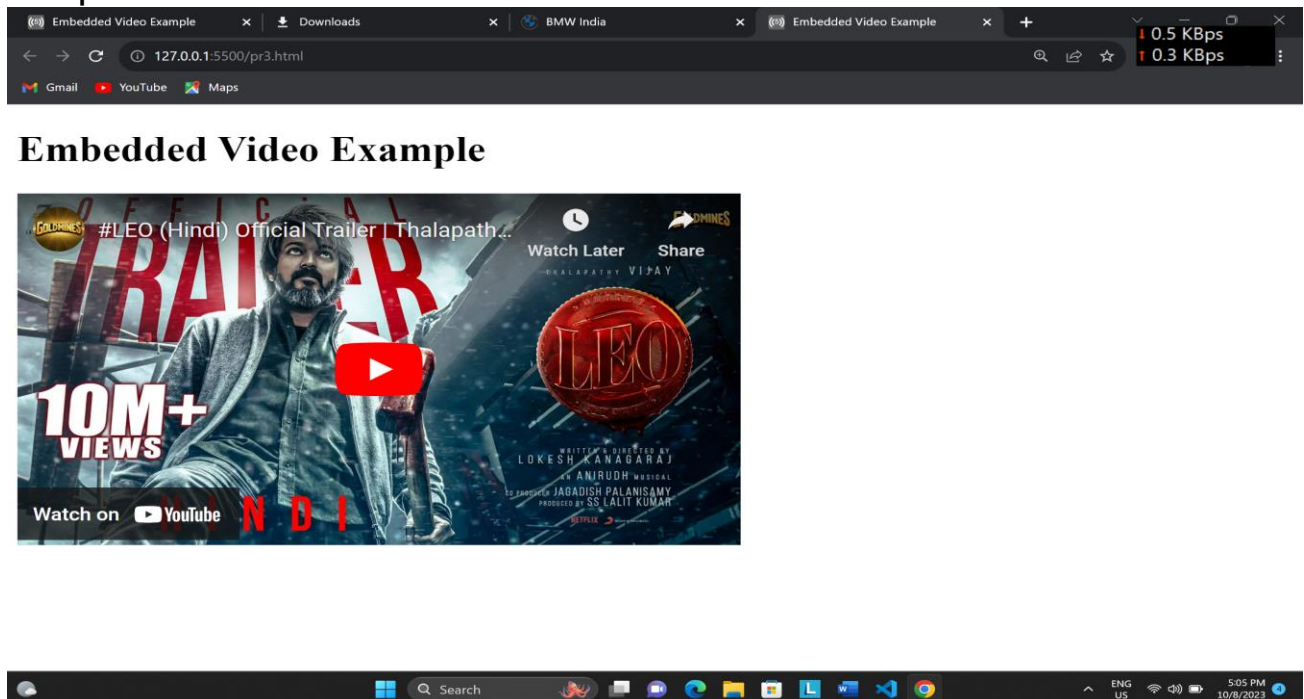

Ans.: Pr3.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Embedded Video Example</title>
</head>
<body>
    <h1>Embedded Video Example</h1>

    <iframe width="560" height="315" src="https://www.youtube.com/embed/3P-
t4WRoW5c?si=FgCEdOMjMyin0WBw" title="YouTube video player" frameborder="0"
allow="accelerometer; autoplay; clipboard-write; encrypted-media; gyroscope;
picture-in-picture; web-share" allowfullscreen></iframe>

</body>
</html>
```

Output:

4.Create a feedback from using HTML code.

Ans:pr4.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Feedback Form</title>
</head>
<body>
  <h1>Feedback Form</h1>
  <p>We value your feedback. Please take a moment to tell us about your
experience:</p>

  <form action="submit_feedback.php" method="POST">
    <label for="name">Name:</label>
    <input type="text" id="name" name="name" required><br><br>

    <label for="email">Email:</label>
    <input type="email" id="email" name="email" required><br><br>

    <label for="rating">Rating:</label>
    <select id="rating" name="rating" required>
      <option value="5">Excellent</option>
      <option value="4">Very Good</option>
      <option value="3">Good</option>
      <option value="2">Fair</option>
      <option value="1">Poor</option>
    </select><br><br>

    <label for="comments">Comments:</label><br>
    <textarea id="comments" name="comments" rows="4" cols="50"
required></textarea><br><br>

    <input type="submit" value="Submit">
  </form>
</body>
</html>
```

Output:

The screenshot shows a web browser window with multiple tabs. The active tab is titled "Feedback Form" and displays a local file path in the address bar: "127.0.0.1:5500/pr4.html". The browser's taskbar at the bottom shows various application icons, including the Start menu, Search, Task View, and several open applications like Edge, File Explorer, and Word. The system tray on the right indicates the language is "ENG US", the time is "5:07 PM", and the date is "10/8/2023".

```

Output:

7. Write a PHP script to display welcome message.

Ans: Pr7.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Welcome Message</title>
</head>
<body>

<?php
    echo "<h1>Welcome!</h1>";
?>

</body>
</html>
```

Output:

Welcome!

8. Write a php script to demonstrate use of arithmetic operators.

Ans:Pr8.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Arithmetic Operators</title>
</head>
<body>
    <?php
        $a = 10;
        $b = 5;

        echo "a = $a, b = $b <br>";

        $sum = $a + $b;
        echo "Addition (a + b): $sum <br>";

        $difference = $a - $b;
        echo "Subtraction (a - b): $difference <br>";

        $product = $a * $b;
        echo "Multiplication (a * b): $product <br>";

        $quotient = $a / $b;
        echo "Division (a / b): $quotient <br>";

        $remainder = $a % $b;
        echo "Modulus (a % b): $remainder <br>";

        $a++;
        echo "Increment (a++): $a <br>";

        $b--;
        echo "Decrement (b--): $b <br>";
    ?>
</body>
```

</html>

Output:

9. Write a php script to calculate total marks of student and display grade.

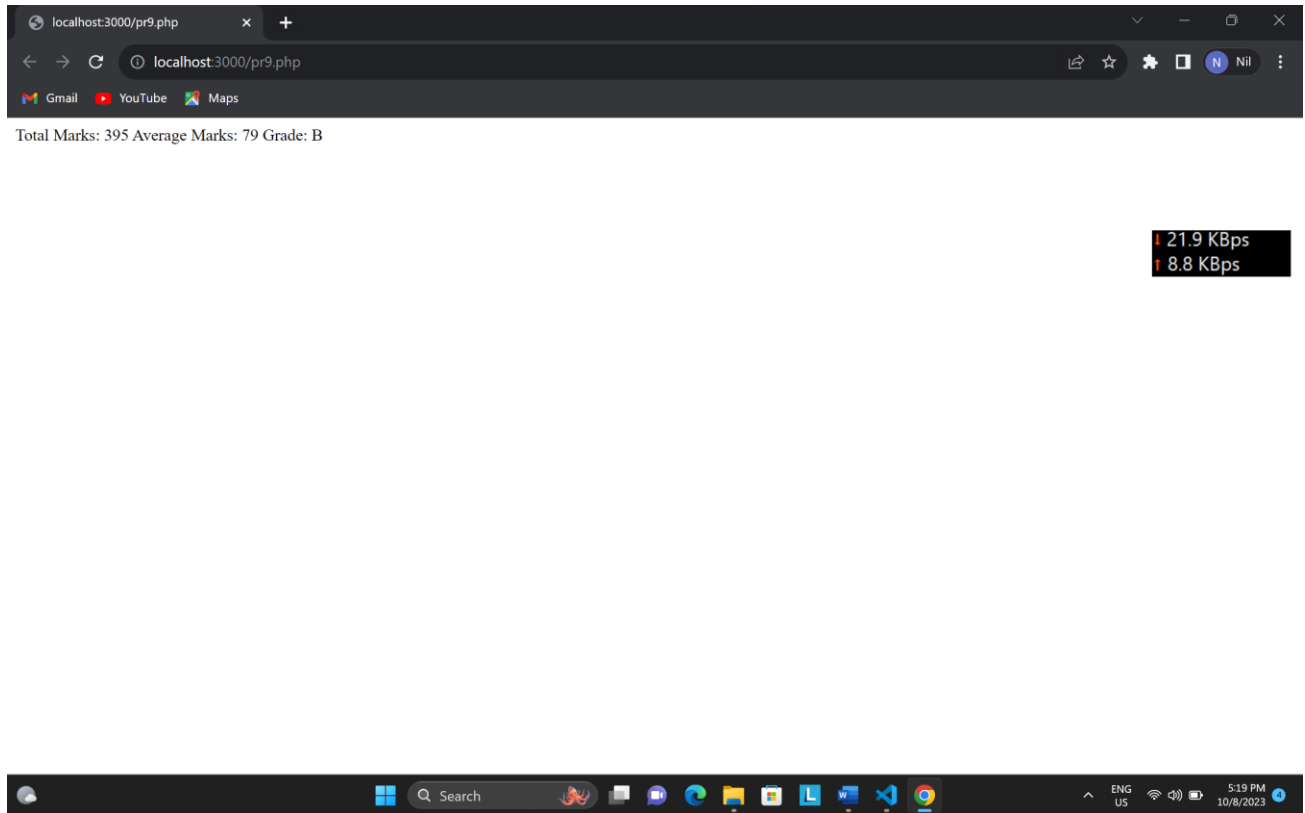

Ans: Pr9.php

```
<?php
$mathsMarks = 85;
$englishMarks = 78;
$scienceMarks = 92;
$historyMarks = 65;
$geographyMarks = 75;

$totalMarks = $mathsMarks + $englishMarks + $scienceMarks + $historyMarks +
$geographyMarks;

$averageMarks = $totalMarks / 5;
if ($averageMarks >= 90) {
    $grade = 'A+';
} elseif ($averageMarks >= 80) {
    $grade = 'A';
} elseif ($averageMarks >= 70) {
    $grade = 'B';
} elseif ($averageMarks >= 60) {
    $grade = 'C';
} elseif ($averageMarks >= 50) {
    $grade = 'D';
} else {
    $grade = 'F';
}
echo "Total Marks: $totalMarks\n";
echo "Average Marks: $averageMarks\n";
echo "Grade: $grade\n";
?>
```

Output:

10.Create form using text box, check box, radio button, select submit button and display user inserted value in new php page

Ans:Pr10.html

```

14. Design a XSLT to read data from XML File and print it in tabular manner. Use XML file of store book information like its name, author, publisher and price for at least two books regarding the DTD for the same file.

Ans:Books.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE bookstore [
    <!ELEMENT bookstore (book+)>
    <!ELEMENT book (name, author, publisher, price)>
    <!ELEMENT name (#PCDATA)>
    <!ELEMENT author (#PCDATA)>

    <!ELEMENT price (#PCDATA)>
]>
<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0" xmlns:xsl="http://www.w3.org/1999/XSL/Transform">
    <xsl:template match="/">
        <html>
            <head>
                <style>
                    table {
                        width: 100%;
                        border-collapse: collapse;
                    }
                    th, td {
                        border: 1px solid #ddd;
                        padding: 8px;
                        text-align: left;
                    }
                </style>
            </head>
            <body>
                <h1>Bookstore Inventory</h1>
                <table>
                    <tr>
                        <th>Title</th>
                        <th>Author</th>
                        <th>Publisher</th>
                        <th>Price</th>
                    </tr>
                    <xsl:for-each select="bookstore/book">
```

```

        <tr>
            <td><xsl:value-of select="title"/></td>
            <td><xsl:value-of select="author"/></td>
            <td><xsl:value-of select="publisher"/></td>
            <td><xsl:value-of select="price"/></td>
        </tr>
    </xsl:for-each>
</table>
</body>
</html>
</xsl:template>
</xsl:stylesheet>

<bookstore>
    <book>
        <name>Book 1</name>
        <author>Author 1</author>
        <publisher>Publisher A</publisher>
        <price>19.99</price>
    </book>
    <book>
        <name>Book 2</name>
        <author>Author 2</author>
        <publisher>Publisher B</publisher>
        <price>14.99</price>
    </book>
</bookstore>

```

Output:

book Information		
Name	author	price
rich dad poor dad	Nil patel	500
gkbook	Joshi yash	55,000
water management	jaimin patel	60,000

15.Design HTML form with java script to perform following task:

- To show “You Clicked Me” message when a user clicks on button “Click Me”.
- Takes Integer number as input and tells whether the number is ODD or EVEN.
- Takes two real numbers as input and perform arithmetic’s operation chosen by user from list of radio button.

Ans:Pr15.html

```
<!DOCTYPE html>
<html>
<head>

</head>
<body>

    <h2>Task 1: Show Message on Button Click</h2>
    <button id="clickButton">Click Me</button>
    <p id="message"></p>

    <h2>Task 2: Check if Number is ODD or EVEN</h2>
    <label for="numberInput">Enter an Integer Number:</label>
    <input type="text" id="numberInput">
    <button id="checkOddEven">Check</button>
    <p id="oddEvenResult"></p>

    <h2>Task 3: Arithmetic Operations</h2>
    <label for="num1">Enter First Number:</label>
    <input type="text" id="num1"><br><br>

    <label for="num2">Enter Second Number:</label>
    <input type="text" id="num2"><br><br>

    <label>Choose an Operation:</label>
    <input type="radio" name="operation" value="add"> Addition
    <input type="radio" name="operation" value="subtract"> Subtraction
    <input type="radio" name="operation" value="multiply"> Multiplication
    <input type="radio" name="operation" value="divide"> Division<br><br>
```

```

<button id="performOperation">Perform Operation</button>
<p id="operationResult"></p>

<script>
    document.getElementById("clickButton").addEventListener("click", function()
{
    document.getElementById("message").innerHTML = "You Clicked Me";
});
    document.getElementById("checkOddEven").addEventListener("click", function()
{
    var number = parseInt(document.getElementById("numberInput").value);
    if (isNaN(number)) {
        document.getElementById("oddEvenResult").innerHTML = "Please enter a
valid number.";
    } else if (number % 2 === 0) {
        document.getElementById("oddEvenResult").innerHTML = "The number is
EVEN.";
    } else {
        document.getElementById("oddEvenResult").innerHTML = "The number is
ODD.";
    }
});
    document.getElementById("performOperation").addEventListener("click",
function() {
        var num1 = parseFloat(document.getElementById("num1").value);
        var num2 = parseFloat(document.getElementById("num2").value);
        var operation =
document.querySelector('input[name="operation"]:checked').value;

        if (isNaN(num1) || isNaN(num2)) {
            document.getElementById("operationResult").innerHTML = "Please enter
valid numbers.";
        } else {
            switch (operation) {
                case "add":
                    document.getElementById("operationResult").innerHTML =
"Result: " + (num1 + num2);
                    break;
                case "subtract":
                    document.getElementById("operationResult").innerHTML =
"Result: " + (num1 - num2);
                    break;
                case "multiply":
                    document.getElementById("operationResult").innerHTML =
"Result: " + (num1 * num2);

```

```

        break;
    case "divide":
        if (num2 === 0) {
            document.getElementById("operationResult").innerHTML =
"Cannot divide by zero.";
        } else {
            document.getElementById("operationResult").innerHTML =
"Result: " + (num1 / num2);
        }
        break;
    default:
        document.getElementById("operationResult").innerHTML =
"Please select an operation.";
    }
}
});
</script>
</body>
</html>

```

Output:

Task 1: Show Message on Button Click

You Clicked Me

Task 2: Check if Number is ODD or EVEN

Enter an Integer Number:

The number is ODD.

0.4 KBps
0.2 KBps

Task 3: Arithmetic Operations

Enter First Number:

Enter Second Number:

Choose an Operation: ☒ Addition ☐ Subtraction ☐ Multiplication ☐ Division

Result: 5

16.Design HTML form with java script for registration purpose with following constraints:

- Name accepts only alphabet character
- Mobile Number with exactly 10 characters
- Email Id in valid format
- Display hint on mouse over the textbox

Ans:Pr16.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Registration Form</title>

</head>
<body>
    <h2>Registration Form</h2>
    <form id="registrationForm" onsubmit="return validateForm()">
        <label for="name">Name:</label>
        <input type="text" id="name" name="name" placeholder="Enter your name"
onmouseover="displayHint('Name should contain only alphabet characters.')"><br><br>

        <label for="mobile">Mobile Number:</label>
        <input type="text" id="mobile" name="mobile" placeholder="Enter your mobile
number" onmouseover="displayHint('Mobile number should have exactly 10
characters.')"><br><br>

        <label for="email">Email:</label>
        <input type="text" id="email" name="email" placeholder="Enter your email"
onmouseover="displayHint('Email should be in a valid format.')"><br><br>

        <input type="submit" value="Register">
    </form>

    <p id="hint"></p>

    <script>
        function validateForm() {

            var name = document.getElementById("name").value;
            if (!/^([A-Za-z])+$/ .test(name)) {
```

```
        alert("Name should contain only alphabet characters.");
        return false;
    }

    var mobile = document.getElementById("mobile").value;
    if (mobile.length !== 10 || !/^d+$/.test(mobile)) {
        alert("Mobile number should have exactly 10 digits.");
        return false;
    }

    var email = document.getElementById("email").value;
    if (!/^[\w-]+(\.[\w-]+)*@([\w-]+\.)+[a-zA-Z]{2,7}$/.test(email)) {
        alert("Email should be in a valid format.");
        return false;
    }

    return true;
}

function displayHint(hintText) {
    document.getElementById("hint").innerHTML = hintText;
}
</script>
</body>
</html>
```

Output:
